The time period for reply, if any, is set in the attached communication.

Application/Control Number: 10/713,130 Page 2

Art Unit: 2621

**DETAILED ACTION** 

Response to Amendment

Applicant has amended all independent claims to recite a simultaneous

generation of "first and second encoded picture data", that is, within a first format and a

second format, when still picture data with audio is captured. The previously-cited

references all assumed that an image format would be pre-selected by the user, and

encoding would only take place in one format, such as JPEG, MJPEG, or MPEG, at

image capture time. See for example *Kato*, col. 3: lines 41–53, which describes first

beginning moving picture coding in the MJPEG format, but not switching to a different

format or encoding in two formats when a user requests a still image capture during

motion image coding. This new limitation of simultaneous encoding with two formatting

methods requires further search and consideration before a final determination of

patentability is made.
